# Important Kitten Facts

---

Thank you for choosing Bosque Animal Clinic for your new furry family members health care needs! We are excited to help you navigate the many challenges of owning a kitten.

Here are a few important things you should know about your new kitten –

- 1** – They are still babies! Do not expect them to know the rules of the house right away. They need time to adjust to their new environment, diet and housemates before they are fully integrated into the home.
- 2** – Housetraining is not just training the kitten – it is just as much training the humans in the house! Be consistent with routines and rewards for your kitten.
- 3** – Teach your puppy it is okay to be handled! Play with their feet and ears often. This will make exams and toenail trims easier on them as they get older!

**Included in your new puppy pack is a zip drive. This zip drive has been LOADED with a lot of resourceful information on kittens! There is information on there regarding vaccines, zoonotic disease, training and much much more!**

We look forward to watching your kitten grow up! If you have any questions, feel free to contact us! If you have any emergencies or urgent issues after business hours or on the weekend, call 505-266-7866
